ITSC-315 Final Project – Web Application Security Audit

<author's name>

Introduction

<What this document contains and will describe, etc.>

Application Design and Components

<Application type and structure, technologies used in the implementation, etc.>

General Security-Related Issues Found

<General issues you found with the application that would affect its security>

Specific Security Issues

Content Injection (HTML and/or JavaScript. *<Describe one of each type>*)

Type of exploit and results of allowing it to occur

Steps to Duplicate Exploit

Application Changes required to harden application against the exploit

SQL Injection Exploit

Type of exploit and results of allowing it to occur

Steps to Duplicate Exploit

Application Changes required to harden application against the exploit

CSRF Exploit

Type of exploit and results of allowing it to occur

Steps to Duplicate Exploit

Application Changes required to harden application against the exploit

XSS Exploit

Type of exploit and results of allowing it to occur

Steps to Duplicate Exploit

Application Changes required to harden application against the exploit

Other Exploits <If you find anything that doesn't fit into the sections above…>

    Type of exploit and results of allowing it to occur

    Steps to Duplicate Exploit

    Application Changes required to harden application against the exploit

Conclusion

    <Summarize your findings overall and leave the reader with overall recommendations for required changes to harden the application against any exploits found>
